DETAILED ACTION

Election/Restrictions

1. Examiner withdraws the restriction requirement made in the previous office action mailed on February 25, 2009 because Butsch et al. (US Pre-Grant Publication 2004/0116218) does not fully teach the special technical feature between Group I and Group II. The special technical feature in an injection molding apparatus which a planetary roller drive connection working in conjunction with two drive systems that engage the planetary rollers from a radially inward and a radially outward position. Busch et al, only teaches that an injection molding system can be retrofitted with a planetary drive system. However, there is no mention of a 1st and 2nd drive part that engage the planetary roller to supply axial and rotational movement.

REASONS FOR ALLOWANCE

2. The following is an examiner's statement of reasons for allowance: Regarding claims 1-26, the closest prior art Hehl (USP No. 6,406,286) discloses an injection molding apparatus which utilizes a planetary gear system in conjunction with multiple drive elements and motors in order to axially and rotationally move an injection molding screw. However, Hehl fails to disclose wherein the 1st and 2nd drive system engage the planetary gear system in a radially inward and a radially outward position.

a. **Additional References cited as closest prior art:**

- i. Maurillo (USP No. 6,682,338)

- (1) Discloses and injection molding system based on a convention drive system which can be retrofitted to use planetary rollers as a drive system.
- ii. Butsch et al. (US Pre-Grant Publication 2004/0116218)
 - (2) Discloses a planetary roller system which can be used to drive an injection mold screw. However, axial movement takes place due to a pulley system.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
